Ransomware attacks are up 300 percent this year compared to 2020. Anyone who uses an electronic device, whether it's a simple cellular phone or a computer that runs a small or large business, is at risk for a ransomware attack. But how does a society defend itself against an unseen enemy and an impending cyber attack?

In Episode 23 of Tulane's "On Good Authority" podcast, School of Professional Advancement cybersecurity expert [Randy Magiera](#) discusses how hacking occurs, what to do following a ransomware attack and how to avoid becoming a victim.
